Self Analysis

5.1 What was the hardest part of the assignment for you?

Getting the right version of python was what took the longest to do. The rest was just remembering all you can do with python. As you would understand, after not using python for a while, you forget a few things about the language.

5.2 What was the easiest part of the assignment for you?

The first question was the easiest part of the assignment, addition is not hard in code.

5.3 What problems helped further your understanding of the course material?

The second Question helped review tiples. The third question helped review python classes and method calls.

5.4 Did you feel any problems were tedious and not helpful to your understanding of the material?

Just the last question took me a second to fully understand what you were asking me to do. The Rest of the assignment was just a good review.

5.5 What other feedback do you have about this homework?

I think for the future you can make it a bit harder
